Claims 1 - 11 (canceled)

12. (original) A method of fabricating a manually operated snow plow, comprising the steps of:

orienting a plow blade at an acute angle from an axis of travel;

extending at least one pivotal leg from a rear of said plow blade;

forming a front extension blade on substantially a leading end of said plow blade;

extending at least one end blade from said plow blade; and

securing pivotally one end of a handle to said at least one pivotal leg.

13. (original) The method of fabricating a manually operated snow plow of claim 12, further comprising the step of:

providing said plow blade with symmetry about a lengthwise centerline such that thereof may plow to the right or to the left by flipping the angled plow assembly over.

14. (original) The method of fabricating a manually operated snow plow of claim 12, further comprising the step of:

forming a front curved surface on at least a bottom of said front extension blade.

15. (original) The method of fabricating a manually operated snow plow of claim 12, further comprising the step of:

forming a rear extension blade at a trailing end of said plow blade.

16. (original) The method of fabricating a manually operated snow plow of claim 15, further comprising the step of:

forming a rear curved surface on at least a bottom of said rear extension blade.

17. (original) The method of fabricating a manually operated snow plow of claim 12, further comprising the step of:

forming a trailing extension blade on a rear of said plow.

18. (original) The method of fabricating a manually operated snow plow of claim 17, further comprising the step of:

forming a trailing curved surface on at least a bottom of said trailing extension blade.

19. (original) The method of fabricating a manually operated snow plow of claim 12, further comprising the step of:

providing said handle having a lengthwise body and a handle portion, one end of said lengthwise body being pivotally connected to said at least one pivotal leg and the other end being terminated with said handle portion.

20. (original) The method of fabricating a manually operated snow plow of claim 12, further comprising the step of:

forming an end curved surface on at least a bottom of said end blade.

Please add claims 21 - 28.

21. (new) A method of fabricating a manually operated snow plow, comprising the steps of:

orienting a plow blade at an acute angle from an axis of travel, providing said plow blade with symmetry about a lengthwise centerline such that thereof may plow to the right or to the left by flipping the angled plow assembly over;

extending at least one pivotal leg from a rear of said plow blade;

forming a front extension blade on substantially a leading end of said plow blade;

extending at least one end blade from said plow blade; and

securing pivotally one end of a handle to said at least one pivotal leg.

22. (new) The method of fabricating a manually operated snow plow of claim 21, further comprising the step of:

forming a front curved surface on at least a bottom of said front extension blade.

23. (new) The method of fabricating a manually operated snow plow of claim 21, further comprising the step of:

forming a rear extension blade at a trailing end of said plow blade.

24. (new) The method of fabricating a manually operated snow plow of claim 21, further comprising the step of:

forming a rear curved surface on at least a bottom of said rear extension blade.

25. (new) The method of fabricating a manually operated snow plow of claim 21, further comprising the step of:

forming a trailing extension blade on a rear of said plow.

26. (new) The method of fabricating a manually operated snow plow of claim 21, further comprising the step of:

forming a trailing curved surface on at least a bottom of said trailing extension blade.

27. (new) The method of fabricating a manually operated snow plow of claim 21, further comprising the step of:

providing said handle having a lengthwise body and a handle portion, one end of said lengthwise body being pivotally connected to said at least one pivotal leg and the other end being terminated with said handle portion.

28. (new) The method of fabricating a manually operated snow plow of claim 21, further comprising the step of:

forming an end curved surface on at least a bottom of said end blade.
